Ensuring Polaris Engineered Accessories fit and work in sync with your machine is the most critical phase of testing and validation. With seamless integration, you can trust that any Polaris accessory you install will enhance your interaction beyond your expectations.

INTEGRATED WINCH MOUNT & PRE-WIRED

Designated mounting points and pre-wired contactors ensure a perfect fit and the strongest place to attach the Polaris Engineered winch - the most dependable winch for your Sportsman. With wiring built right into the vehicle, we made this the easiest Sportsman winch ever made to install.

P. 12

INTEGRATED PLOW MOUNT

The attachment points for the best-in-class Glacier Plow System are integrated right at the factory and feature an innovative drive-up and go installation process.

P. 46

P. 19, 30

Lock & Ride mounting locations allow for limitless customization to let you work the way you want.
Right from the factory, your vehicle is built to make essential accessories like winches and plows easy to use day-in and day-out. Mounting brackets are designed into the oversized factory bumper and wiring is routed securely and properly. When it comes to Sportsman, Polaris Engineered Accessories make work easier so you can get more done.

ALL-TERRAIN TRACTION

Polaris-specific gearing provides 1:1 ratio to:
• Minimize track slip, providing better climbing ability and improved traction in deep snow
• Improve top speed over prior models by approximately 5%
• Reduce operating RPM for a quieter ride
• Improve durability, which allows vehicle to run at a lower RPM, decreasing engine wear

New front dual stabilizer for improved stability

Flexible lug design provides the highest level of deep snow performance by lifting up in deep snow as opposed to digging down

Lightweight design provides for better flotation, easier steering effort, and provides better vehicle control

Polaris exclusive optimized hub geometry that minimizes feedback and noise steering effort

Flexible lug design provides the highest level of deep snow performance by lifting up in deep snow as opposed to digging down

It’s tough to make Sportsmen even more versatile than it already is. But with a set of Prospector Pro Tracks, you’ll do just that. Tread through deep snow without concern.

**Angle Your blade RIGHT FROM YOUR SEAT WITH THE GLACIER PRO PLOW HYDRAULIC ANGLE SYSTEM**

**CONVENIENCE**

Lift and angle adjustments can be made from the driver’s seat.

**ROBUST FRAME**

A plow system is only as strong as its frame, and Polaris Engineered plow frames have a wide frame to withstand the stresses of heavy plowing.

**DURABLE BLADES**

Available in strong stamped steel or corrosion-resistant poly materials, Polaris Engineered plow blades cover a large surface area for quick snow removal.

POLARIS NORTHSTAR COOLERS CAN SURVIVE JUST ABOUT ANYTHING - FROM EXTREME HEAT TO A NASTY TUMBLE OFF A VEHICLE.

GRIZZLY TESTED.
POLARIS APPROVED.

This cooler is IIDC-approved, meaning it withstands the power expended by a typical grizzly bear if it was trying to get inside.

Seriously, there are experts who know what a grizzly is capable of doing, and they certify our coolers can take it.

FOR THE LIFE OF YOUR RIDE

MAINTENANCE TIP

BREAK-IN PERIOD
The break-in period for your new Sportsman is the first 25 hours of operation, or the time it takes to use the first two tanks of fuel. No single action on your part is as important as a proper break-in period. Careful treatment of a new engine will result in more efficient performance and longer life for the engine.

MTGS: Maximum torque ground speed

BATTERIES
To ensure a battery maintains its level of charge when stored for extended periods of time, the battery should be connected to a BatteryMINDER. P. 94. We recommend that the battery be tested for condition at the beginning of every storage period.

THROTTLE OR HIGH SPEEDS
During the first three hours of operation, or the time it takes to use the first two tanks of fuel, no single action on your part is as important as a proper break-in period. Careful treatment of a new engine will result in more efficient performance and longer life for the engine. Oil filters should be checked for wear and oil or coolant loss. The water injection system, if so equipped, should be checked for excessive corrosion or weeping.

HALF SHAFT
Check for tear and punctures in the boot which can lead to CV joint wear. The boot should be checked for cracks, excessive corrosion or warping.

OIL FILTERS
Changes of filters with every oil change to provide the best engine protection and keep the engine operating at peak performance.

POLARIS ENGINEERS PARTS THAT PUSH THE LIMITS WITHOUT SACRIFICING STRENGTH AND DURABILITY. We build our products so anyone with the right tools can maintain their vehicle from their own garage - and get them back on the trails where they belong.

AIR FILTERS
A clogged air filter can restrict air flow to the engine leading to reduced engine performance, engine life or catastrophic failure.

DRIVE BELTS
Polaris Engineered belts deliver unmatched performance for your off-road vehicle. Developed and tested on all our engines for all environments and conditions. Check your belt for delamination, hour glassing and glazing.

BREAK-IN PERIOD
- Use lower gear (if available) while varying speeds and avoid wide open throttle for 10 km.
- If no low gear is available, vary at moderate speeds while avoiding wide open throttle for 10 km.

PS-4 FULL-SYNTHETIC OIL

PS-4 is optimal for ambient operating temperatures of -40° C to 38° C

OUR FORMULATION
• Full-synthetic formula with additive, high viscosity range
• Extreme cold weather flow and shear protection
• Maximum rust and corrosion protection
• Proprietary anti-wear additive system

YOUR ADVANTAGE
• High-shear anti-wear protection with anti-scorch additive, extreme heat, severe and normal high RPM use case
• Extremely low deposits, extremely low volatility under heat and stress
• Protects engine from moisture that can contribute to loss of power and accelerated engine wear.

PS-4 EXTREME-DUTY FULL-SYNTHETIC OIL

PS-4 Extreme Duty is optimal for ambient operating temperatures of -18° C to 54° C

OUR FORMULATION
• Full-synthetic formula with additive, high viscosity range
• Extreme cold weather flow and shear protection
• Maximum rust and corrosion protection
• Proprietary anti-wear additive system

YOUR ADVANTAGE
• Extreme high-temperature engine protection
• Full-synthetic formula with additive, extreme heat, severe and normal high RPM use case

FOR THE LIFE OF YOUR RIDE
ONLY THE BEST WILL DO

To create the best oil for any terrain, we invest in rigorous testing to ensure our oil delivers the consistency and performance you demand.

WHAT COUNTS IN OIL TESTING:
1. Does it protect the engine at high temperatures?
2. Does it keep the engine free from carbon and buildup?
3. Does the oil hold its viscosity over time?

ENGINE CHECKPOINTS

Polaris engineers focus on key areas within the engine when evaluating engine oil and its ability to protect the life of your ride. Critical checkpoints include:

PISTON RINGS & RING LANDS: Extreme pressure to these parts require high lubricant film strength. Poor oxidative performance can lead to carbon and varnish buildup, which results in poor ring seal and fuel dilution of the oil. These can result in loss of power and accelerated engine wear.

ROD BEARINGS: Engine bearings on an oil with low film strength and thinner viscosity can lead to premature wear or even engine failure.

CAMSHAFT: Direct acting overhead camshafts are used on many Polaris engines. In this application the camshaft pushes directly on the valve, creating very high contact pressures compared to other camshaft configurations. These forces are so great that inferior oil can break down leading to increased wear and potential engine damage.

BatteryMINDer®
ENSURE YOUR RIDE IS READY WHEN YOU ARE.

BATTERY MAINTENANCE TIPS
Extend your battery life with a BatteryMINDer and these tips.

1. Store batteries in a cool, dry location.
2. Check that the battery connections are tight. Cables should not be able to be rotated or shifted by hand.
3. If your battery has a drain, ensure it is free of cables.
4. Give your battery a cleaning soft brush to scrub the top of the battery and into rivets.
5. Connect a BatteryMINDer to the battery when not in use.

HOW MUCH TIRE SEALANT DO YOU NEED?

TIRE HEIGHT (IN.) × TIRE WIDTH (IN.) / 5 = OUNCES REQUIRED PER TIRE

Ex: 27" × 10" / 5 = 54 oz.

HOW IT WORKS
Tire sealant remains liquefied inside your tire until a leak develops in the tire or wheel.
